

DESCRIPTION

To obtain the maximum life from docril awning and blind products, the following points should be noted:

1. Keep the fabric clean by hosing regularly to remove dust, bird droppings and other solid particles.
2. Do not apply detergents, cleaning fluids or insecticides.
3. Keep petrol, oil, solvents, kerosene and other similar fluids away from the fabric.
4. Do not allow bird droppings, earth, sand or vegetable matter to remain in contact with the fabric.
5. Water based stains should be treated first by rinsing with cold water. If this is not sufficient, Docril may be washed with a mild solution of soap in lukewarm water and rinsed thoroughly. We recommend gentle brushing with a soft brush or sponge as harsh scrubbing can damage the teflon coating.
6. It is important that a Docril awning or blind is let down to dry after wet weather and should not be rolled up or stowed away when wet. Outdoor furniture and cushions should also be dried before storing away.

STUBBORN STAINS: CLEAN THOROUGHLY WITH NON-ABRASIVE HOUSEHOLD CLEANERS, DILUTED RUBBING ALCOHOL OR DILUTED BLEACH. RINSE IMMEDIATELY WITH CLEAN WATER AND DRY THOROUGHLY.

DESCRIPTION

To obtain the maximum life from outdoor products incorporating Bradmill Outdoor Canvas, the following points should be noted:

1. Keep the fabric clean by brushing regularly, both inside and outside, with a soft brush and by hosing occasionally with clear, cold water – starting at the lower edge of the fabric working upwards.
2. Do not apply soaps, detergents, cleaning fluids or insecticides.
3. Keep petrol, oil, solvents, kerosene and other similar fluids away from the fabric.
4. Do not allow bird droppings, earth, sand or vegetable matter to remain in contact with the fabric.
5. Ensure that the canvas is thoroughly dry before stowing it away.
6. Should mildew spots appear, brush them off before they become attached.
7. Persistent mould or mildew growth should be treated with White King* solution, strictly in accordance with the instructions outlined below.
8. Canvas which has been cleaned extensively may require reproofing. Bradmill 'Duradux' compounds are recommended for this purpose. Duradux Mildew and Waterproofing Compound (CPPRF) should be used on fabrics which are open to mildew attach - and may be used on darker coloured fabrics. Tenting fabrics, especially lighter brighter colours where mildew is not a potential problem, should be treated with Duradux Waterproofing Compound (CPWP).

USE OF WHITE KING* AS A MILDEW REMOVER

White King is a bleaching and cleansing agent which is effective in removing mildew growth on canvas and killing mildew spores.

SAFETY

Read the safety directions on the White King label and follow these directions carefully. Wear rubber gloves and avoid contact with skin and eyes.

PREPARATION

- *Read all directions thoroughly before commencing.
- *As some tenting fabrics are not colourfast, an inconspicuous section of the tent should be tested with the solution before proceeding. Bradmill Outdoor Fabrics tenting qualities are colourfast to this treatment.
- *The treatment is best performed outdoors, and best results together with easier application are achieved when the canvas is in

a taut position – tents, annexes etc. should be fully erected; where this is not possible, spread on a clean surface.

*Remove dust and dirt by lightly brushing. Heavy soiling should be washed off with clear, warm water - do not use soap, detergents or other cleaning agents.

APPLICATION

*White King should be diluted with water, 1 part of White King to 3 parts of water. It should not be mixed with other chemicals or cleaners.

*Apply this solution evenly to the outside at a rate that will penetrate the fabric, working the solution into the canvas with a stiff brush or broom.

*Hose the solution off thoroughly after 15 minutes, continuing to hose down until run-off is clear.

*If mildew is not completely removed, allow canvas to dry, then repeat the application.

*Do not allow the solution to remain on the canvas for more than 20 minutes without thoroughly rinsing or damage may occur.

*White King solution is not a re-proofing agent, but acts as a pre-treatment to remove mildew and spores. After completely drying, the canvas is pre-treated and ready for an application of Bradmill Duradux Mildew and Water Proofing Compound.

WORKING QUALITIES

*Properly applied, White King solution will remove mildew and kill spores.

*Care must be taken that the solution does not come in contact with anything other than the canvas being treated. Any splashes or spills should be thoroughly washed off immediately with water.

*The solution will yellow lawns, however this will grow out.

*White King solution will remove mildew, but not obstinate stains. It is designed as a pre-treatment to Duradux Proofing Compound which should not be applied until fabric is completely dry.

*As Ricky Richards (Sales) Pty Ltd and Bradmill Textiles Pty Ltd have no control over the condition of fabric to be treated, or the method by which the solution is applied and removed, no responsibility for fabric failure or other consequence of the treatment can be accepted.

CLEAN UP

*Wash applicators with clean water.

COVERAGE

5 litres of *White King solution will treat approximately 10 square metres of canvas, once.

DESCRIPTION

Mix a weak concentration of detergent (1:20) in tepid water.
The detergent must not contain any solvents.

Wet the top of the fabric with the detergent and water mix. You can apply this mixture with a soft cloth, soft-bristle brush or soft mop.
After this has been completed, rinse off with plenty of fresh water until no residue remains.

For mildew: wash with liquid detergent, tepid water and diluted chlorine bleach (1:20), then rinse with plenty of fresh water until no residue remains.

Avoid harsh rubbing or scrubbing. Any implement used must not be too hard or coarse, otherwise the surface will be damaged.

Austral T

ent & Canvas Products takes no responsibility for the performance of any cleaning agent and any potential damaged caused to the surface of the material as a result of the use of such.

DESCRIPTION

TO OBTAIN THE MAXIMUM LIFE FROM OUTLOOK MESH PRODUCTS, THE FOLLOWING POINTS SHOULD BE NOTED:

1. Keep the fabric clean by brushing regularly both on the top and underside with a soft bristled brush and by hosing occasionally with clear, cold water.
2. Do not apply soaps, detergents, cleaning fluids or insecticides.
3. Keep petrol, oil, solvents, kerosene and other similar fluids away from the fabric.
4. Do not allow bird droppings, earth, sand, or vegetable matter to remain in contact with
5. the fabric.
6. It is important that an Outlook awning or blind is let down to dry after wet weather and should not be rolled up or stowed away when wet. Outdoor furniture and cushions should also be dried before storing away.

STUBBORN STAINS: CLEAN THOROUGHLY WITH
NON-ABRASIVE HOUSEHOLD CLEANERS, DILUTED RUBBING ALCOHOL OR DILUTED BLEACH - 1:20 concentration.
RINSE IMMEDIATELY WITH CLEAN WATER AND DRY THOROUGHLY
